STATEMENT OF THE CHAIRMAN OF THE SUPERVISORY BOARD

The dawning of the new millennium marks a further stage in the development of TBC Bank. It is now eight years since the Bank started its operations. While this is but a short period in the overall history of banking, for a bank in Georgia it is not without significance. It is no exaggeration to state that the road we have traveled has been both long and complicated. However we are delighted to report that we have traversed that path successfully.

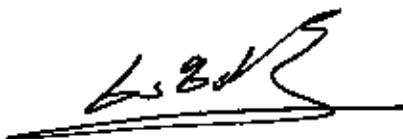

When we opened TBC Bank we tried to model ourselves upon the tradition of banking that existed previously in the country. The first bank in Georgia was established more than 100 years ago. Honesty, integrity and customer care are the values that we have inherited from the century long history of banking here. It has been our aim to revive and develop these values. This is our contribution to the banking system of Georgia and the values that we believe underpin the future of successful banking in the country.

I would like to share my fundamental belief that a robust banking system in Georgia provides the essential basis for business development and the improvement of living standards in the country.

Finally, I would like to thank all our customers, employees and partners for their trust and support. Moreover I assure you, that we will continue to deploy our best efforts and energy towards achieving the strategic plan and objectives set by the bank.

STATEMENT OF THE PRESIDENT OF “TBC BANK”

The reporting year was both important and successful for “TBC Bank”. The Bank's share of the local financial market measured by assets is now 16.3 %. “TBC Bank” is the market leader in respect of customer services. Reflecting the growth in the Bank's operations and its increase in market penetration, the number of personnel has risen to two hundred.

The financial plan for 2000 was successfully implemented. As of December 31, 2000 the net income of the Bank was GEL 3,664 thousand. The volume of assets, GEL 87,682 thousand at 31 December 2000, increased by 32.6% over 1999. ROA and ROE were respectively 4.8% and 27.2%. The level of asset growth is explained by the significant increase in the volume of income assets. During 2000, the credit investments of the Bank increased from GEL 38 million to GEL 56 million. The volume of income assets increased from GEL 56 million to GEL 75 million.

Bank liabilities showed some dynamic trends during 2000. There was a 70.1% increase in the volume of balance on the accounts.

“TBC Bank” continues to increase its countrywide penetration. Currently there are eight branches. In Tbilisi a branch was opened in the Mtatsminda district of the city and according to customer feedback the location is considered a good one.

The International Financial Corporation (IFC) and the German Investment and Development Company of (DEG) became shareholders in the Bank during 2000, both with a ten percent stake. The attraction of major international financial and development institutions into the Bank points to the underlying strength of the Bank and is an additional guarantee of continued stability and long-term development.

In September 2000 “TBC Bank” was delighted to receive a rating from “Thomson Financial BankWatch”. This is the first time that a Georgian company has acquired an internationally recognized rating. Thomson Financial BankWatch pointed

towards stability, transparent activities, and a young and educated management as the strengths of the Bank. This rating is welcome news for our shareholders, customers and partners.

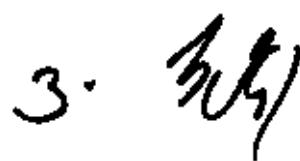

The Financial Department introduced further International Accounting Standards (IAS) into the Bank. "PriceWaterhouseCoopers" an auditing company rendered technical assistance to the Department over the year and confirmed that the implementation of these standards was high.

The Credit Department was reorganized during 2000. There are now separate units for credit risk management and sales. This change will ensure the maintenance of a sound credit portfolio, particularly in a time of rapidly growing credit investments.

The Bank has completed its overall structural reorganization. "Front" and "Back" office was separated. One highlight of the changes is that the Treasury is now an independent unit. The Treasury manages short-term liquidity, foreign currency risk and combines the function as the payment center for all the branches. Moreover the Bank has established a planning and control service.

"TBC Bank" has now developed a comprehensive mission statement and a three-year strategic vision. Flowing out from these specific action plans for the various departments of the bank have been adopted as well as strict control mechanisms for implementation.

Finally, I would like to thank our customers, partners, shareholders and the staff of the Bank for their significant contribution towards the Bank's current and future development.

PRODUCTS AND SERVICE

The competitive advantage of "TBC Bank" defined in the Vision is its high quality service. We consider the major characteristics of high quality to be the time and procedures necessary for the service, as well as certain benefits additional to the basic service.

We will standardize all our service types and monitor these standards in all our branches.

We will have a diversified set of products targeted towards individual customer requirements. This will ensure the dynamic growth of our customer base.

MARKETING STRATEGY

The three-year plan (2001-2003) is the stable development of the Bank upon attracting small and medium size enterprises, large enterprises, international organizations and affluent individual customers.

For expansion on the target segments the Bank should pay attention to the development of new products and its distribution channels, as well as on the quality of service.

INFORMATION TECHNOLOGIES

"TBC-Bank" took all the necessary precautions to ensure that the threatened Y2K problem never affected its banking operations.

A new S.W.I.F.T. system software "Alliance Access" was introduced into the Bank (replacing the "IBM Merva" system). As a result the reliability, speed and quality of processing of international transactions has increased.

During 2000 the Bank moved towards completing its network between branches and Head Office. This network is based on equipment, deciphering and VNP technologies produced by "Cisco" Company.

Uninterrupted, safe and rapid interchange of information is already being carried out with the branches. Branch staff can receive information from the corporate intranet (internal communication net) and interchange electronic messages through the network.

A modified version of the existing banking program has been introduced. It is based on client-server technologies. The result is an increase in the speed of transaction processing and higher reliability in the maintenance of the Bank's main database. Additionally new software for electronic banking was introduced. This provides both greater efficiency and increased potential.

The selection of a set of modern banking software is one of the most important projects among the measures planned for 2001. The Bank will call upon foreign expertise in choosing the appropriate systems. The functional potentialities of the new system should meet both the existing and future demands of the Bank.

A fully automated banking system will enable us to adapt the organizational structure of the Bank further towards Western standards, improve the quality of client services and increase the variety of banking products.

CUSTOMER SERVICES

Customers have benefited from structural changes completed during 2000. These changes have resulted in a clear distinction between "Front" and "Back" office processes. Thus, customers can clearly see the separation of head office processes and the operation of customer services at the Vake Central Branch. The Bank now has seven branches throughout the country. A further four branches are expected to open in 2001. This will enable the bank to meet more closely the requirements of our target customers.

A new communication network with the branches will be completed in 2001. The network will improve the accounting of transactions carried out in branches at the central database. This will result in more efficient and fast implementation of reporting, analysis and control.

Also in 2001 we plan to introduce a new self-service network for customers. This will be carried out based on electronic banking services, ATM and internet technologies.

CREDIT PORTFOLIO AND NEW PRODUCTS IN LENDING

The credit portfolio continues to develop and broaden based upon the long term vision of the Bank. During 2000 there has been an improvement in methodology and the introduction of new credit products.

In 2000 the volume of the credit portfolio increased by 1.45 and totaled GEL 55.8 million by the end of the year. The high investment level in total assets has been maintained - 64%, while the loan revenue makes up 62% of the total revenues of the Bank

The maintenance this trend coupled with a reduction in interest rates is accounted for by qualitative indicators and the high diversification of the portfolio.

The average weighted interest rate for the total credit portfolio (pawn loans not included) was 26.2% by the end of 1999. By year-end 2000 the corresponding indicator fell to 24%. Banks in Georgia have started using the price factor as a competitive instrument. As a result, banks are now considering and have started issuing more long-term loans.

"TBC Bank" has diversified its loan and credit portfolio and expanded its customer base. The annual financial and other indicators justify the choice made:

- Market share of TBC Bank's credit portfolio exceeds 13%;
- The share of credit revenues in the total revenues has been maintained;
- The repayment rate of loans has increased without any significant increase in the level of loan loss reserve;

DIVERSIFICATION OF THE PORTFOLIO

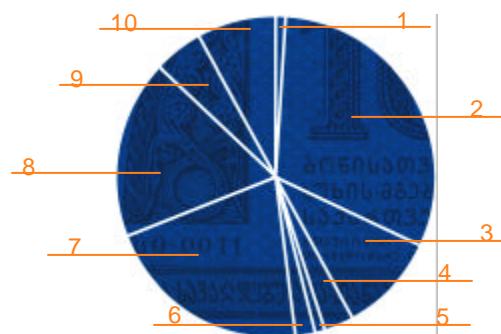

The increase in the Bank's capital was also influenced by the contributions made by the new shareholders in June 2000. As a result, the Bank was able to increase funding into large volume projects. Nevertheless the volume of the major part of the loans (49%) is up to GEL 500,000.

The expansion of the branch network has enabled the Bank to broaden its coverage of loans in the regions of the country and start long-term partnerships with new customers. By the end of the year the credit investments of Nadzaladevi, Rustavi, Borjomi, Kutaisi and Poti branches was 22.3% of the Bank's total portfolio, as compared to 5% last year.

Diversification of the loan portfolio has facilitated the Bank to move into a broader range of economic sectors. While trade still represents a significant share (32%), the priority sectors of the Bank - transport, communication and energy now form a significant share of the total credit investment. The majority of loans in these areas are long-term income assets, characterized by stable growth. The share of construction and real estate in the Bank's credit activity continues to develop. The Bank introduced a new credit product - mortgage loans, as a result of an analysis of that market. The share of individual consumer loans has also increased. In total, together with pawning of gold, the share made 18% of the portfolio.

The structure of the credit portfolio with respect to loan terms has radically changed. In particular, the share of the loans with a term over 1 year is rapidly increasing, and has reached almost half of the total portfolio volume (48.1%). Half of the volume covers loans of a 2-year duration. Most of these loans concern local production, services and infrastructure.

NEW CREDIT PRODUCTS

The decision of the Bank to design and introduce new credit products is a logical continuation of the diversification of the credit portfolio. SME crediting and funding of trade projects (including using documented letters of credits) still remain the principal products. The motivation of crediting institutions to expand their range of products was a result of processes taking place on the financial market. "TBC Bank" initiated a number of new products.

However before introducing new financial products, extensive market research and risk assessment exercises were undertaken. Particular attention was paid to training staff, determining loan evaluation criteria and the consideration of methods for the stable establishment of the product on the market.

Following the introduction of micro-credits (1,000 to 15,000 USD loans to small businesses), two new products were added to the credit portfolio of the bank in 2000 - mortgage loans and personal loans. In determining such loans the credit worthiness of the applicant is considered along with the level of control imposed by the Bank.

MORTGAGE LOANS

The introduction of mortgages was governed by two main factors. Firstly there is price stability on the real estate market and secondly there is a notable increase in the level of stable income of certain parts of the population.

The main condition for issuing a mortgage loan is both the level and stability of income of the potential borrower. Additionally, the applicant must demonstrate his own contribution towards the cost of construction or the purchase of real estate. The Bank evaluates the liquidation price for the currently owned property as well as future real estate of the applicant and can use it as a security on the loan.

Currently the bank issues mortgage loans for 5 years. However, the Bank hopes in the future to offer the classical feature of the mortgage loan - a longer repayment period.

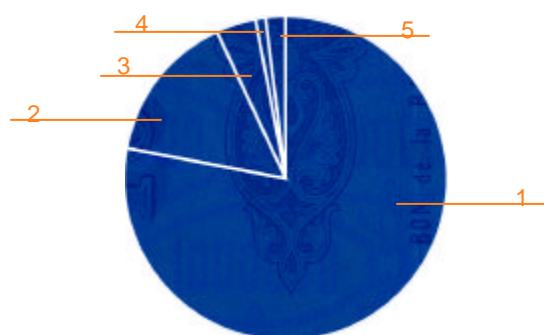

PERSONAL LOANS

Georgia now has a generation of qualified young people with stable incomes. However until recently this section of the population that has buying-power, has not been in a position to get credit. The Bank in 2000 determined the market volume, and has introduced conservative procedures for credit that will ensure the stability of personal loans within the range of credit products.

The main pre-condition for determining the loan amount and its term is the current income level of the applicant, and that the Bank can. Real estate, as well as other personal property of the applicant and future guaranteed income can be used as security upon the loan.

The development of personal loans is an extension of the debit and credit cards that are now widely used by the Bank's customers.

New products will be directly connected with the economic and social development of the country. The Bank continues to monitor developments on a regular basis and marketing plans are refined based upon this analysis.

CREDIT ORGANIZATION

In the second half of 2000 a new organizational structure of the credit department was introduced. This ensures individual and parallel support of credit product sales and risk management. Credit officers, located in each branch, analyze market demands and target potential customers within the limits of credit policy. The risk management unit at the head office works to minimize the risk to the Bank based upon the specificities of the product.

The risk management unit is established inside the main Credit Department. In the future it will be the instrument for the constant monitoring of the parameters of credit policy. This will reduce the level of risk for each product and result in a consistent diversification of the total portfolio.

The number of the credit managers nearly doubled in 2000. This increase is likely to continue during 2001. A priority of the human resources policy of the Bank is to improve and upgrade qualifications in the risk management. A highly professional staff will result in better loan decision-making and the further profitability of the products. Investment in training in 2000 resulted in the average period for loan approval to reduce from fifteen to seven days. At the same time the risk rate of the total portfolio has not increased and the profitability of the loans has been maintained.

In 2000 the bank started the development of a new automated program for its loan and credit portfolio. The program is planned to be operational by the second quarter of 2001. This will be the first software product of its type in Georgia and will have a significant impact upon the efficient management of the income assets of the Bank.

INVESTMENTS

The Security market of Georgia is still in its infancy. As a consequence and until all the capital market institutions are properly formed, "TBC Bank" investment activities remain mostly concentrated on the banking-financial sector. Given the Bank's type of activities, this requires the direct participation of the Bank as an institution that invests particularly in a banking academy, a processing centre for plastic cards, SWIFT, among other specific banking activities.

The Bank's management position remains unchanged. This is that no investment will take place unless the institutionally and financial stable environment is created for investment activities.

In 2000 the Bank Management visited a number of western financial institutions, including UBS and Bank Vontobel. The purpose was to consider specific cases of the allocation of long-term risk assets on the securities market of Western Europe, including modern models of asset management by particular financial foundations.

The investment strategy of the bank will continue to focus on direct investment into new types of companies on the Georgian financial market, together with strategic and local partners. This will expand the potential area of efficient allocation of assets by the Bank, as well as the volume of sales of the financial instruments and banking products through the improvement of the assortment and distribution channels.

Overarching the Bank's decision to invest in joint projects will be to give advantage to those projects with strategic partners and well-known international financial institutions. In this way we shall obtain necessary know-how and sufficient capital volume for the object of investment.

"TBC BROKERAGE"

"TBC Bank" continues to be involved in the process of establishing a securities industry. In June 1999 "TBC Bank" founded an affiliate - JSC "TBC Brokerage" for this purpose.

Official trading on the Securities Market of Georgia started in April 2000. "TBC Brokerage" is one of the founders of the Securities Market, with 40 other brokerage companies. Based on the results of transactions carried out during 2000, "TBC Brokerage" has become the unquestioned favourite according to all criteria.

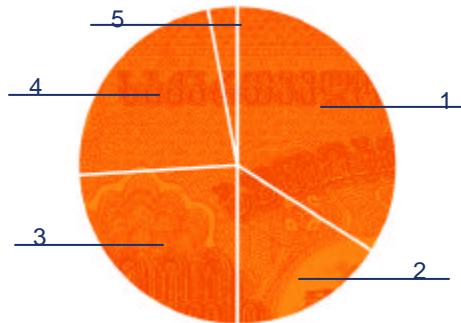

The Securities Market of Georgia's reported that as of 31st December 2000 there were shares of up to 300 Joint Stock Companies in the trade system of the market. The total number of transactions during the year was 605 and 48.7% of them were carried out by "TBC Brokerage". During May-December 2000 "TBC Brokerage" registered the purchase or sale of 1,000,000 shares at the off-exchange market.

Services were also carried out for individuals and companies and consulting services were offered to joint stock companies for the preparation of annual, semi-annual and current reports based on general agreements.

It is planned to increase the rate of growth and development of these activities further in 2001. This will increase the popularity of securities in Georgia.

INTERNATIONAL CREDIT LINES

During 2000 the Bank developed further its cooperation with international financial institutions. The Bank attracted an amount equivalent to US\$4.3 million from international sources. As a consequence more than 200 SME projects were funded through these resources. The volume of long-term liabilities increased by 36.6% during the year. (Although it should also be mentioned that the Bank covered long-term liabilities of a value of more than US\$3 million). This was 23% of the total liabilities as of December 31 2000.

In February 2000 two agreements amounting to EURO 2 million were signed with DEG. This amount was used for funding business loans.

Negotiations were concluded with IFC concerning the allocation of an additional US\$3 million of credit. This is to be used for SME and mortgage loan programs.

DEPOSITS

The year 2000 showed significant growth rate of balances on the accounts of our customers. This fact has led to the strengthening and growth of the Bank's market position. As of December 31, 2000 this amount was 52,782 thousand GEL. This figure marks an 71.3% increase on the figures for 1999. The balance of the interest bearing accounts was 28,661 thousand GEL, an increase of 119% on 1999. At the same time it should be mentioned that the share of the interest bearing accounts (time deposits, saving deposits) was 20.5% of the total relevant figure for the whole banking sector (as compared to 14.1% in 1999). A new product was introduced in 2000 - deposits payable to bearer. The Bank also started to diversify its deposit products. This project diversification is likely to be concluded in the first quarter of 2001.
